

SMTP – 3 options to choose from.

We have three options for configure smtp or email details for send email from there emails

- 1) **SMTP** [get smtp details from your mail or domain provider]
- 2) **SNS** [<https://docs.aws.amazon.com/sns/latest/dg/sns-email-notifications.html>]
- 3) **Send Grid** [<https://auth0.com/docs/customize/email/smtp-email-providers/configure-sendgrid-as-external-smtp-email-provider>]

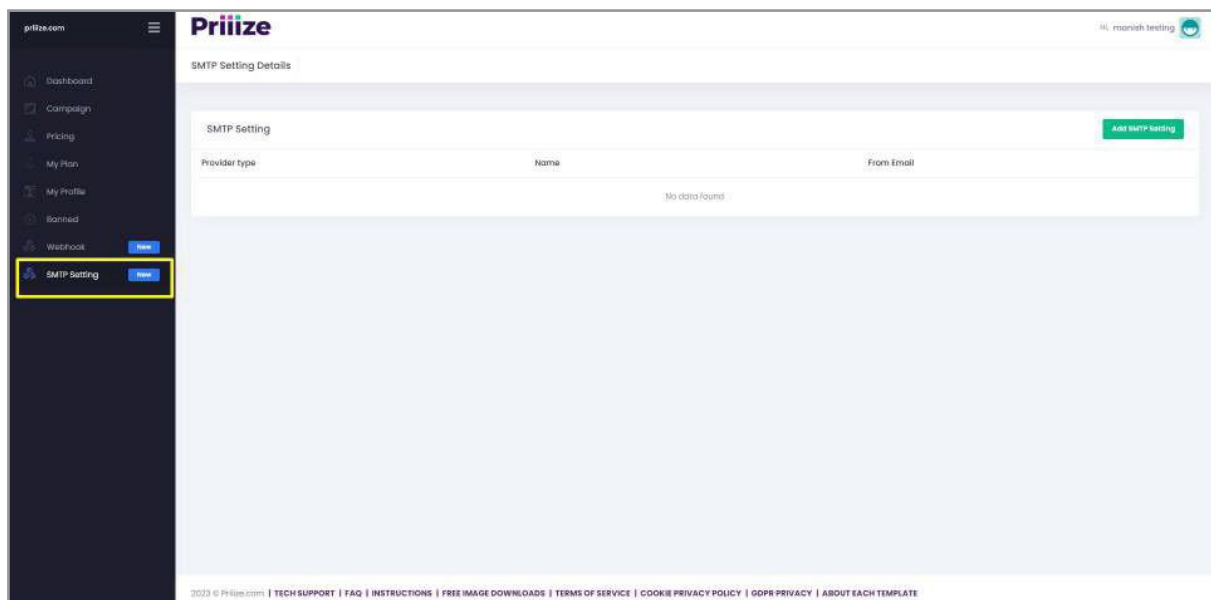

Turn off “Email” toggle to stop sending emails from Priiize.

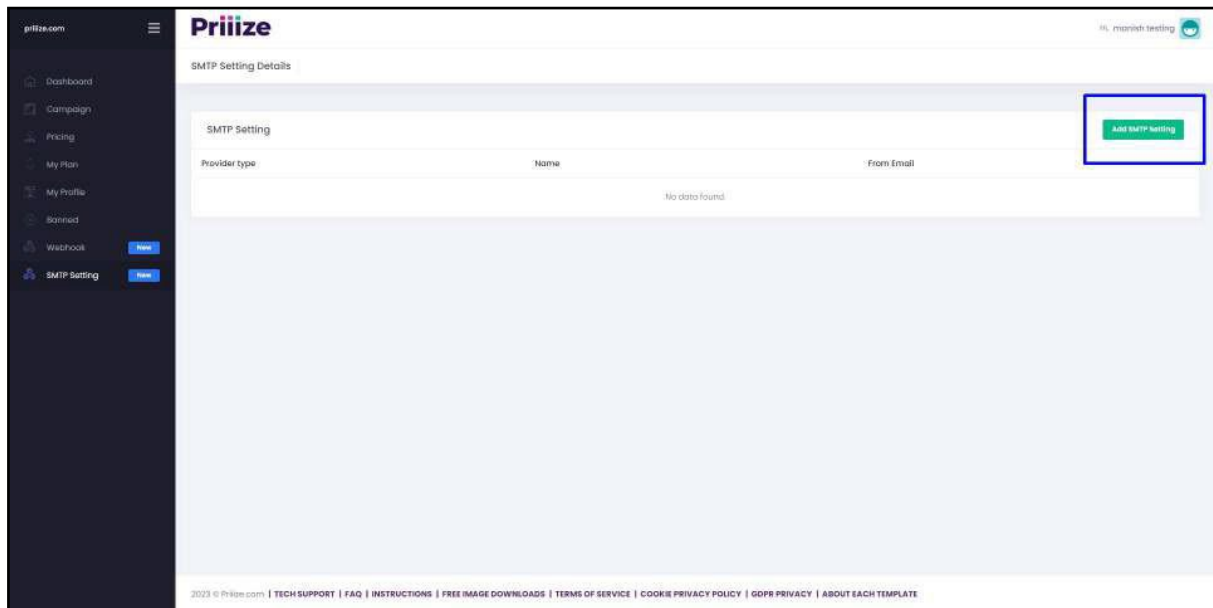

Instructions for SMTP setting.

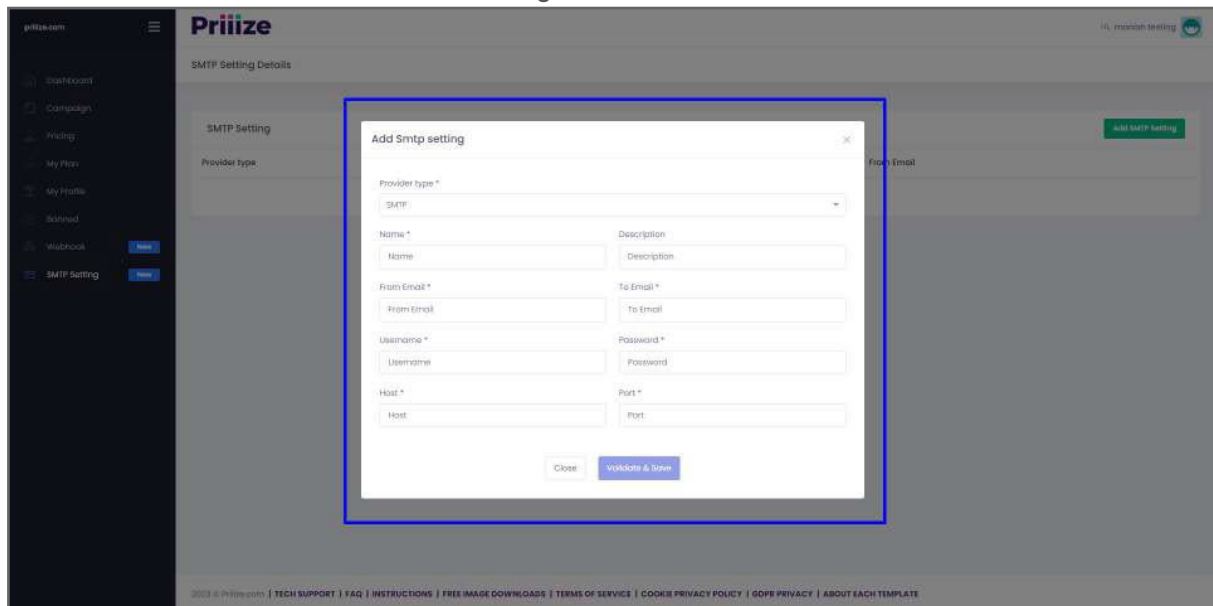

SMTP Setting

SMTP settings are simply your outgoing mail server settings; this particular protocol only works for outgoing messages. Most email software is designed to use SMTP for communication purposes when sending email.

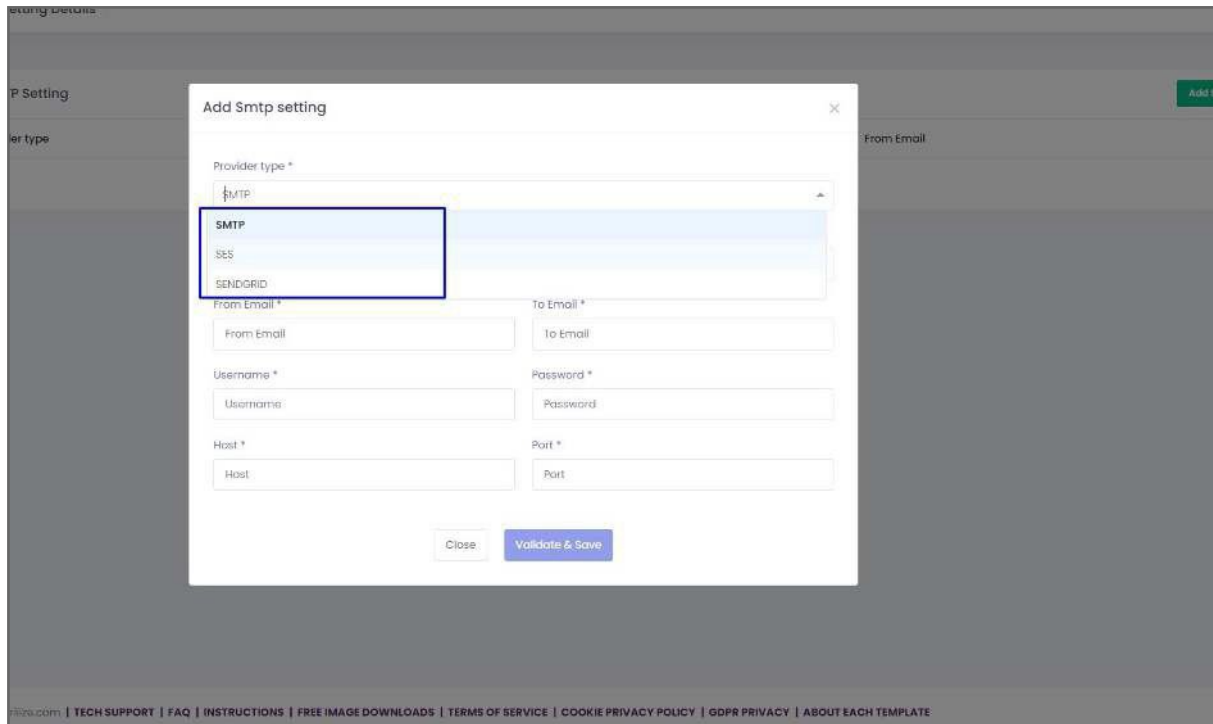

When the user clicks the “Add SMTP setting” button that time one model is visible on the screen.

There we manage the 3 types of providers, 1. **SMTP** 2. **SES** 3. **SENDGRID** – select the one you will be using.

SMTP (Simple Mail Transfer Protocol)

SMTP Email Relay Solutions is a transactional email service formerly from SharpSpring and now a J2 Global company.

SES (Simple Email Service)

Simple Email Service is an outbound-only email-sending service useful for marketing and transactional email, relying on the infrastructure.

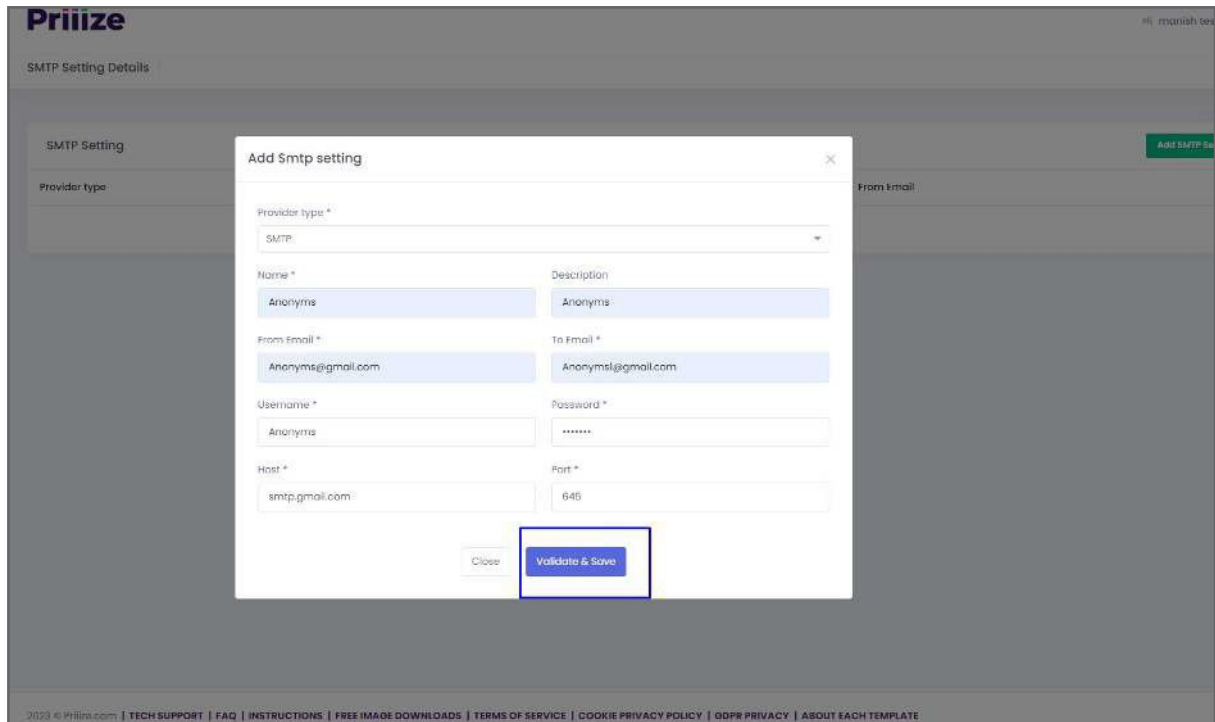

SENDGRID [<https://auth0.com/docs/customize/email/smtp-email-providers/configure-sendgrid-as-external-smtp-email-provider>]

SendGrid is a cloud-based SMTP provider that allows you to send email without having to maintain email servers.

SMTP: Suppose User selects SMTP provided then fields visible in the below.

- Name**
